

but I want to add some more features to it
on the upper right corner - the completion percentage and
and lower left corner - your reading speed in minutes/page and time
you will take to finish the book

Here's the live demo with both stat overlays added:

Top-right — a circular progress ring with "X% complete" that fills as you turn pages.

Bottom-left — your reading pace (min/page) and estimated time remaining, which updates live as you adjust the slider below the book.

You can also click the left or right half of the book directly to turn pages (in addition to the prev/next buttons). To wire this up to a real PDF, you'd render each page to a canvas using `pdf.js` and draw those canvas images instead of the placeholder colored panels.

I told you that I want to make a website....didn't you read the PDF properly...
why are you making a demo...
generate a document having everything...that it'll take to make this website...every technology every step
such that even a guy who doesn't even know what is a website can make it after reading the PDF (though I am going to give it to some AI agent)
I don't know what do you call this document but anyways do it

Now I have everything I need. Let me write the full technical specification document.
